WK 3 / 12

The nightly close

One calm number a day, a robot that collects it — and the student who invented the whole idea

We grade decisions, not outcomes.

WHAT IS “THE CLOSE”?

The number the whole world writes down

New York trades **2:30pm → 9:00pm** on an Irish clock

All day, the price is a squiggle of handshakes. At the bell, one last deal happens — **the close**. The squiggle evaporates. The close survives: it's what the papers print, what funds are valued on, what history remembers. An index — the S&P 500 — is just a basket's close.

Calm decisions come from calm data.

We look once a day, after the noise stops. Anyone selling you urgency is selling something.

Education, not advice.

YOUR IDEA, SHIPPED

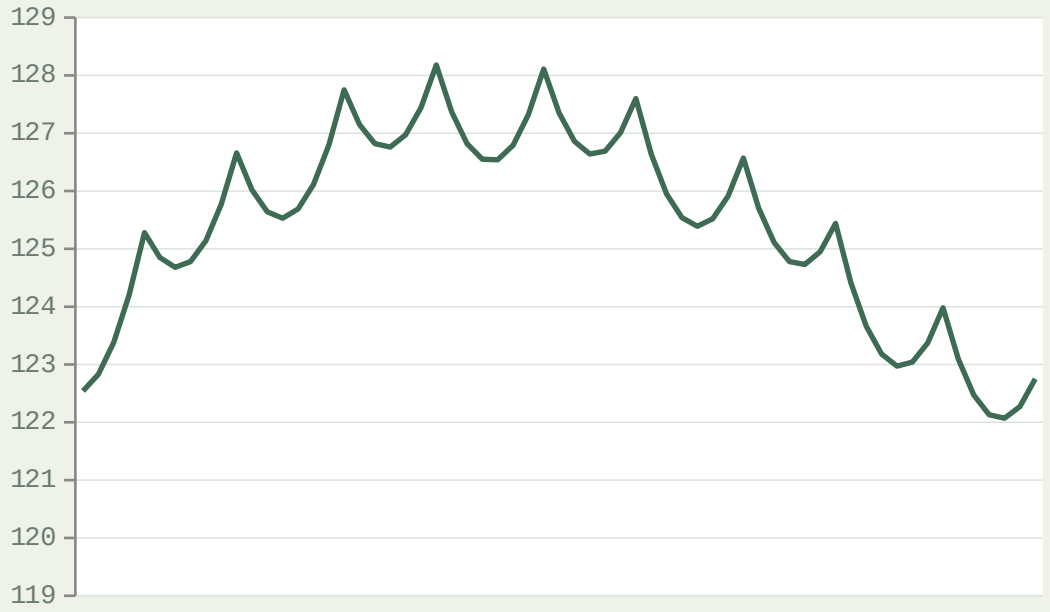

Last week, someone asked:

“Why not fetch everything once at night, and remember it?”

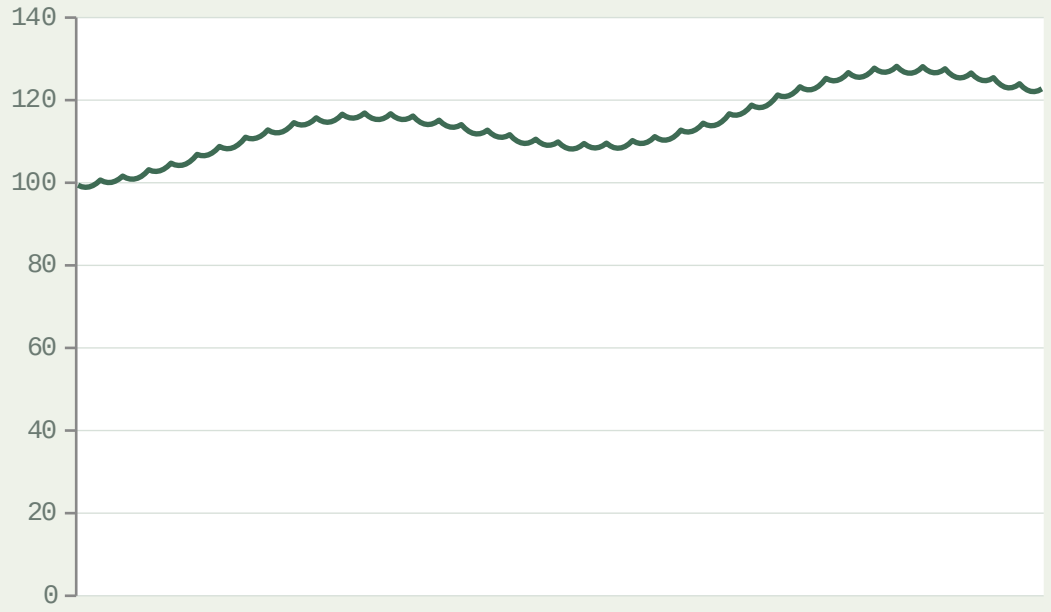

— [student's name], week 2

Tonight at 23:30, a robot does exactly that: visits every company on our list, writes down the close, goes back to sleep. **Their idea. Running nightly. In public.**

Same company. Same data. Different story.

Last 3 months — “it's falling!”

Five years — “it's been climbing for years”

The timeframe is a choice someone made before showing you the chart.

THE UNIVERSE

The tin you can read

48

companies tested

31

verified — the course universe

17

refused by the free data plan

Every test result is published — who passed, who was refused, and why. **Nobody hid the gaps; we documented them.**

Compare that with any tip-seller's stock list, where you never see what was left out, or why.

WHAT A NOTEBOOK IS WORTH

Asking the world vs asking your own notes

858 ms → **9 ms**

last week's live lookup — and it spent ration

tonight's chart, from the course's own cache — free, unlimited

Same data. The difference: somebody wrote it down.
We stopped asking the world and started asking our own notebook.

0:55 — PHONES OUT, NO BUDGET, NO QUEUE

Chart safari

1 Chart your week-2 company — or adopt one from the universe

2 Find its best and its worst stretch of the last five years

3 One journal line: what story does the shape suggest —
and what can the shape NOT tell you?

(It can't tell you why. It can't tell you next.)

THE ROBOT'S DIARY

Trust systems that record their own failures

Every visit, logged

Success, refusal, limit hit — the robot writes down its own night's work, including the failures, where anyone can audit it.

Why that matters

Banks and brokers are audited on the same principle. A system that only ever reports wins is not a system — it's a brochure.

Week 6 will put it harder: good systems fail honestly; scams never fail well.

1:20 — HOMEWORK

Watch nightly. Act never.

The discipline drill

Each night this week, glance at your company's chart — and do nothing. Notice the urge to act. Journal it once: “Day 3: wanted to do something; didn't; nothing was lost.”

For next week

Bring one question about what makes a company actually WORTH something. Next week we open the books — real accounts, real numbers, Mr. Market himself.
